Data sheet | next125 NX 505 & NX 650

Materials | Fronts NX 505 L335 jaguar green satin and NX 650 in old oak in combination with systemo® marble Carrara effect

Planning features | Wall-mounted system for base unit line with handle option TIP-ON, handleless design with horizontal and vertical grip ledges, open shelf wall unit with sliding door, support panel shelf 2,5 cm, worktop and recess cladding in systemo®

Description

Sophisticated colours and materials united in an extraordinary kitchen formation. The cool, bright white of the worktop in Marble Carrara effect is a nice contrast to the warm appeal of the satin lacquer colour in jaguar green and the elements in old oak. The planning as well plays with contrasts: massive kitchen block and block-like peninsular unit vs. floating base unit line being mounted on the wall.

Wall-mounted system

The wall-mounted next125 system provides floating design solutions. The construction on a 125 mm-grid system of the next125 collection creates a purist kitchen architecture supporting horizontal alignment. Wall-mounted elements which are also available in tall unit version open up the transition of the kitchen architecture to the living space.

Material description

NX 505 Satin lacquer-front in 16 colours

Satin lacquer next125: The principle of diversity captured in fascinating shades. 16 colours of a generous band width – between bright accents and covered chic – arouse the charm of combining creating space for personal interpretation of the kitchen. In terms of the environment, the next125 satin lacquers are produced in a water-based dual-cure procedure.

NX 650 Old oak

A wood full of character and lived memories – individual and unique: The front old oak. For this purpose, selected wooden beams from old stocks – e.g. a barn – are processed into veneer. This forms the basis for the wood veneered fronts. The old oak front of next125 stands for authenticity and naturalness.

The old oak corresponds to the current spirit of the time, because things reflecting tradition and history stand for consistency and value in our fast-moving time. Therefore, the signs of the times also belong to the old oak: Branches in varying degrees, cracks, colour differences and age-related marks. In order that all these distinctive features are shown to their best advantage, the material is offered for continuous doors only in order to be able to generously represent the unique image of the veneer.
